Remark:

1. All Parameters, if not specified, are measured at 230VAC/50Hz and 25°C ambient temperature.
- 2.LED Driver is a component of the luminaires, Luminaires and wire layout will affect the EMC, please check the EMC with end products again.
- 3.During the PUSH DIM test, the number of parallel connections must be less than 15PCS

3. Label

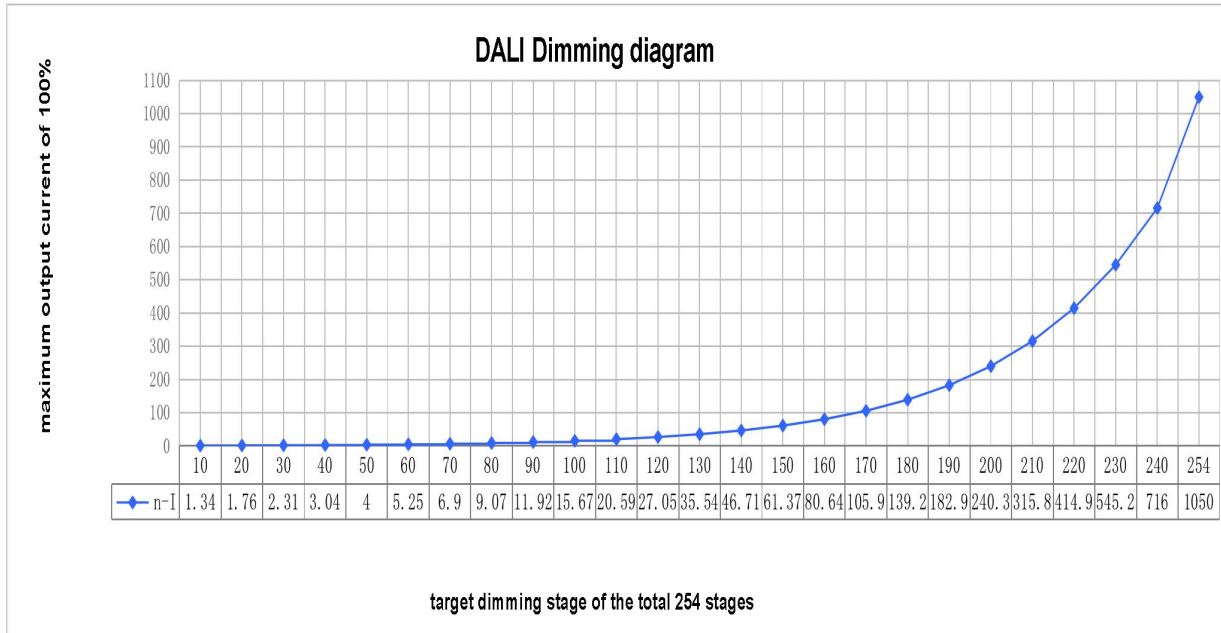

4. DALI dimming curve

formula for DALI dimming.

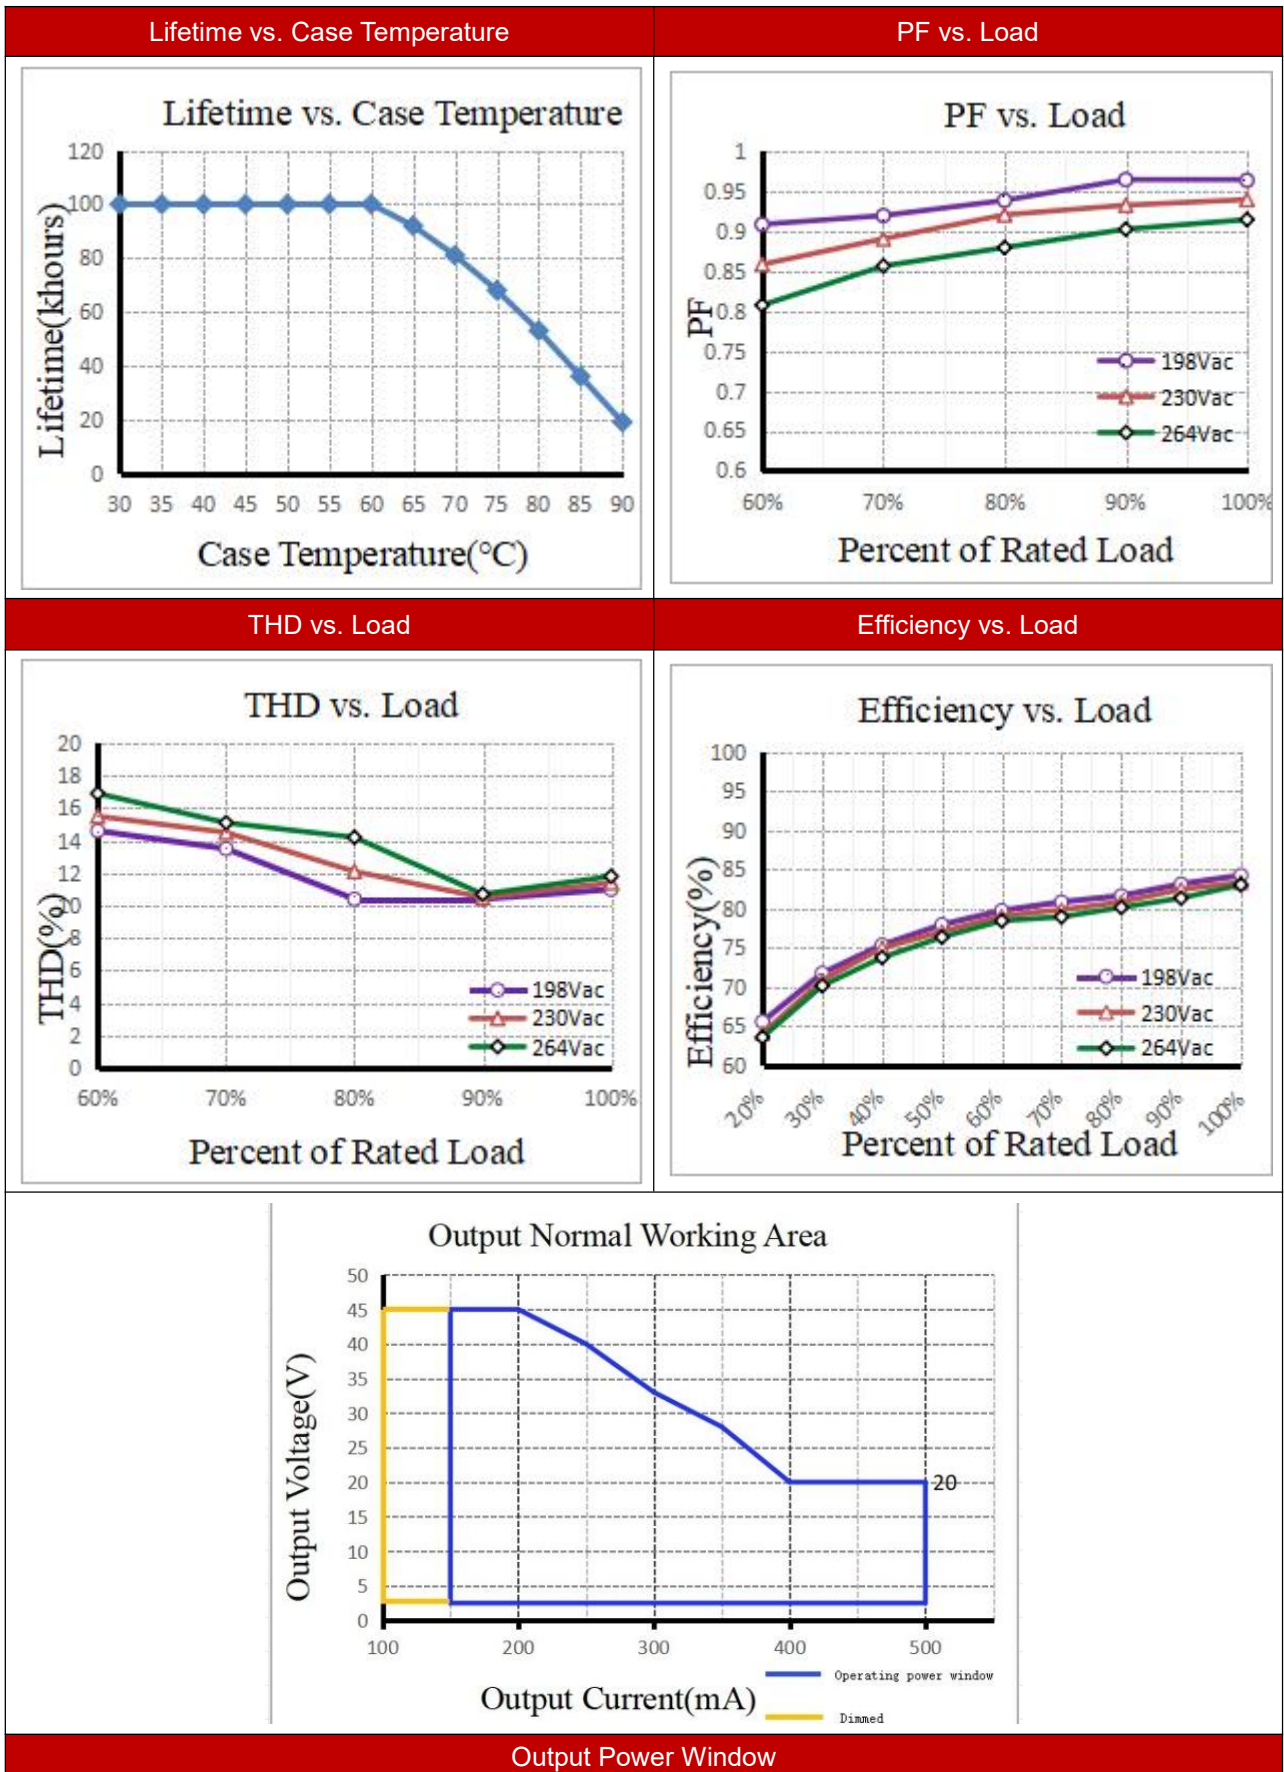

$$X(n) = 10^{\left\{ \left[\frac{(n-1)}{(253/3)} \right] - 1 \right\}}$$

Here, n means the target dimming stage of the total 254 stages.

X(n) means the percent of the maximum output current

8. Wiring Diagram

9. Wiring instructions

- All connections must be kept as short as possible to ensure good EMI behaviour
- Mains leads should be kept apart from LED Driver and other leads (ideally 5 – 10 cm distance)
- Advice the maximum length of output wires is 3 m
- Secondary switching is not permitted (Except for constant voltage)
- Incorrect wiring can damage LED modules.
- The wiring must be protected against short circuits to earth (sharp edged metals parts, metal cable clips, louver, etc.)
- Hot plug-in is not supported due to residual output voltage of > 0 V up to mains voltage. Danger to life.
- When connecting an LED load, restart the device to activate the LED output.
- This can be done via mains reset or via interface (DALI, DSI, switch DIM).

10. Replace LED module

- Mains off
- Remove LED module
- Wait for 30 seconds
- Connect LED module again

Hot plug-in or secondary switching of LEDs is not permitted and may cause a very high current to the LEDs

11. NFC instructions

REMARK:

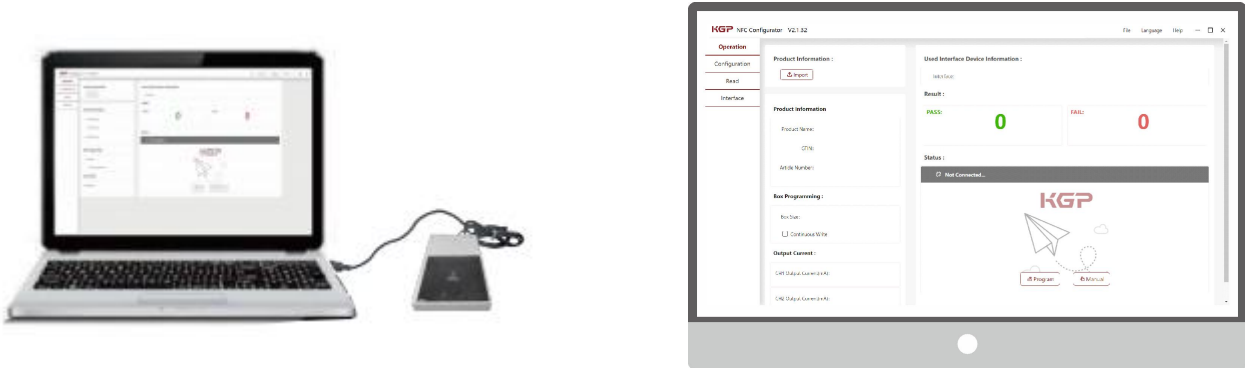

You are advised to set DALI parameters when the power supply is not enabled

Make sure your phone has NFC capability and has it activated.

NFC Reader (optional)

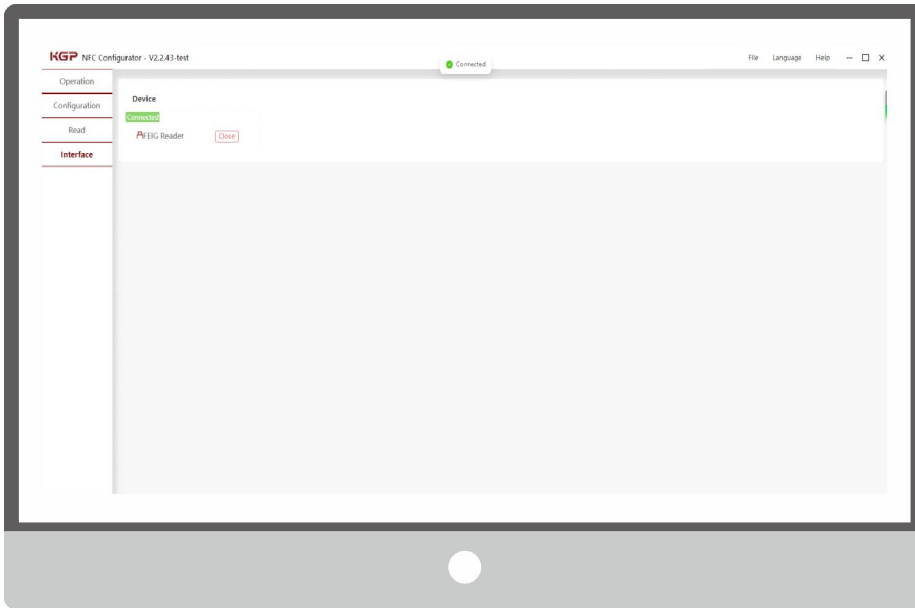

Feature:

Easily on-line read a output current from a driver or write a new current data to a driver throughout KGP NFC reader within few seconds.

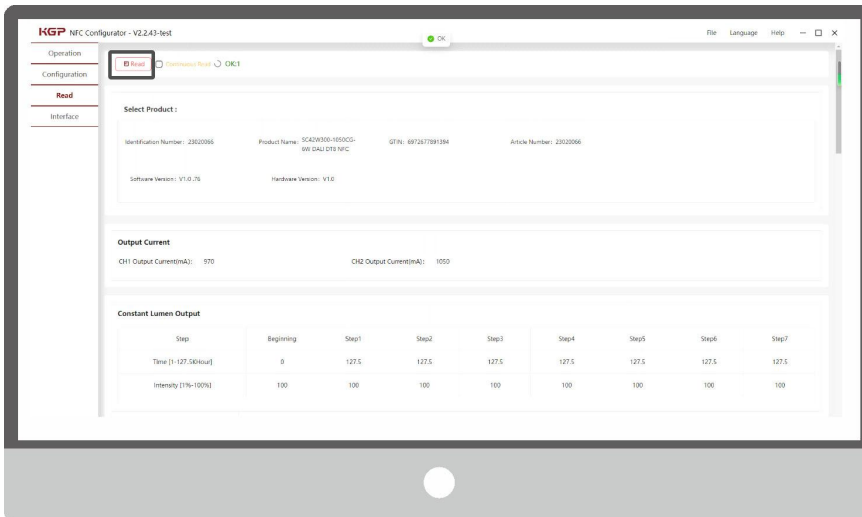

Product	Description	Interface	Matching antenna	Zhaga approval	Usage

Step 1: Connect FEIG reader

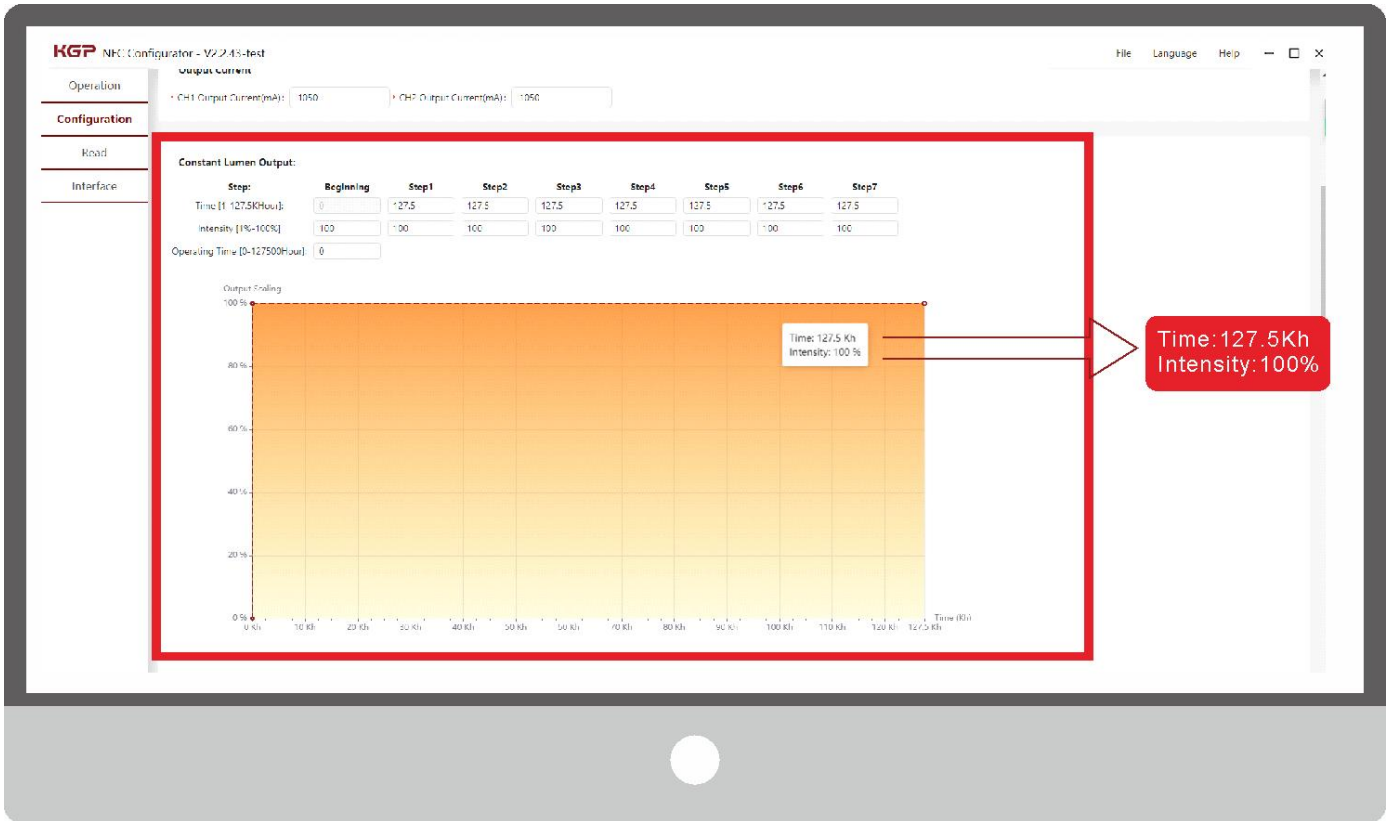

Step 2: Read product information

Click "Read" button to read

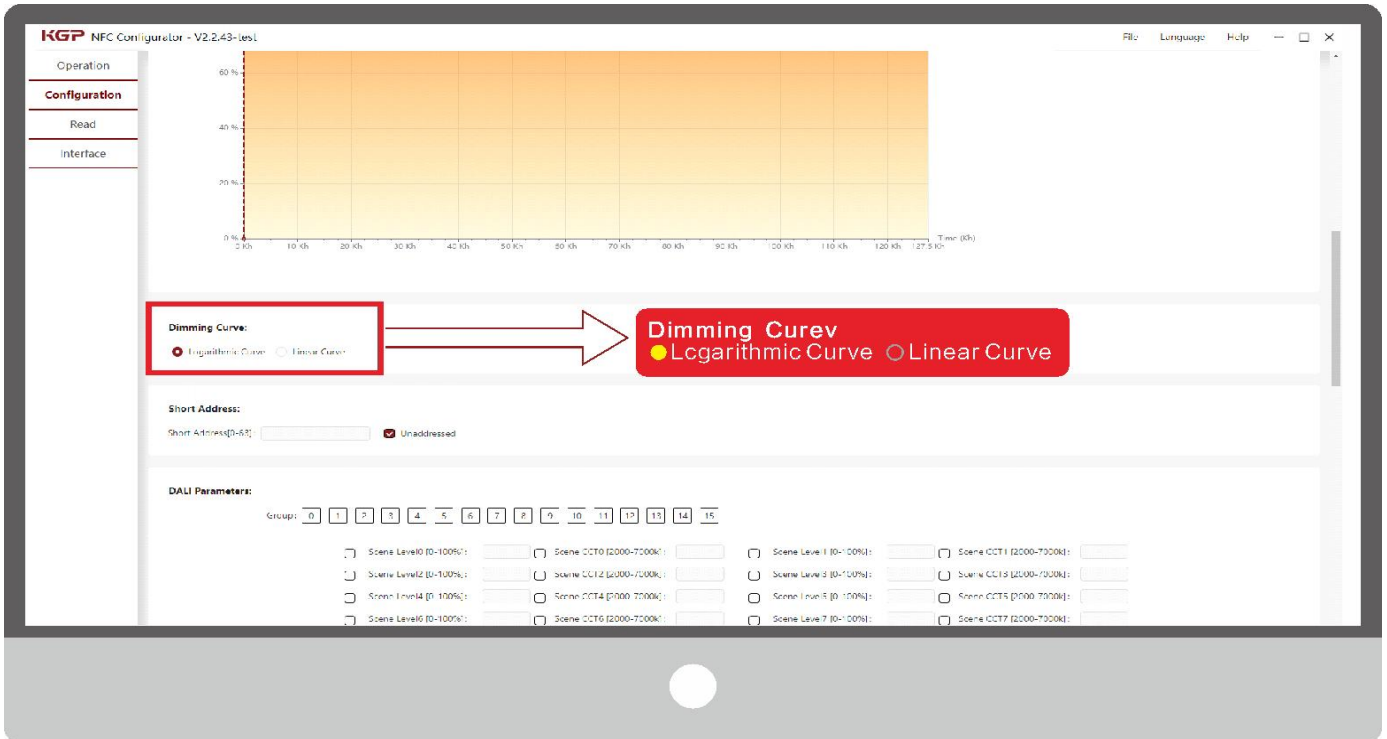

Step 3: Few parameter interface, you can choose the setting based on your requirements.

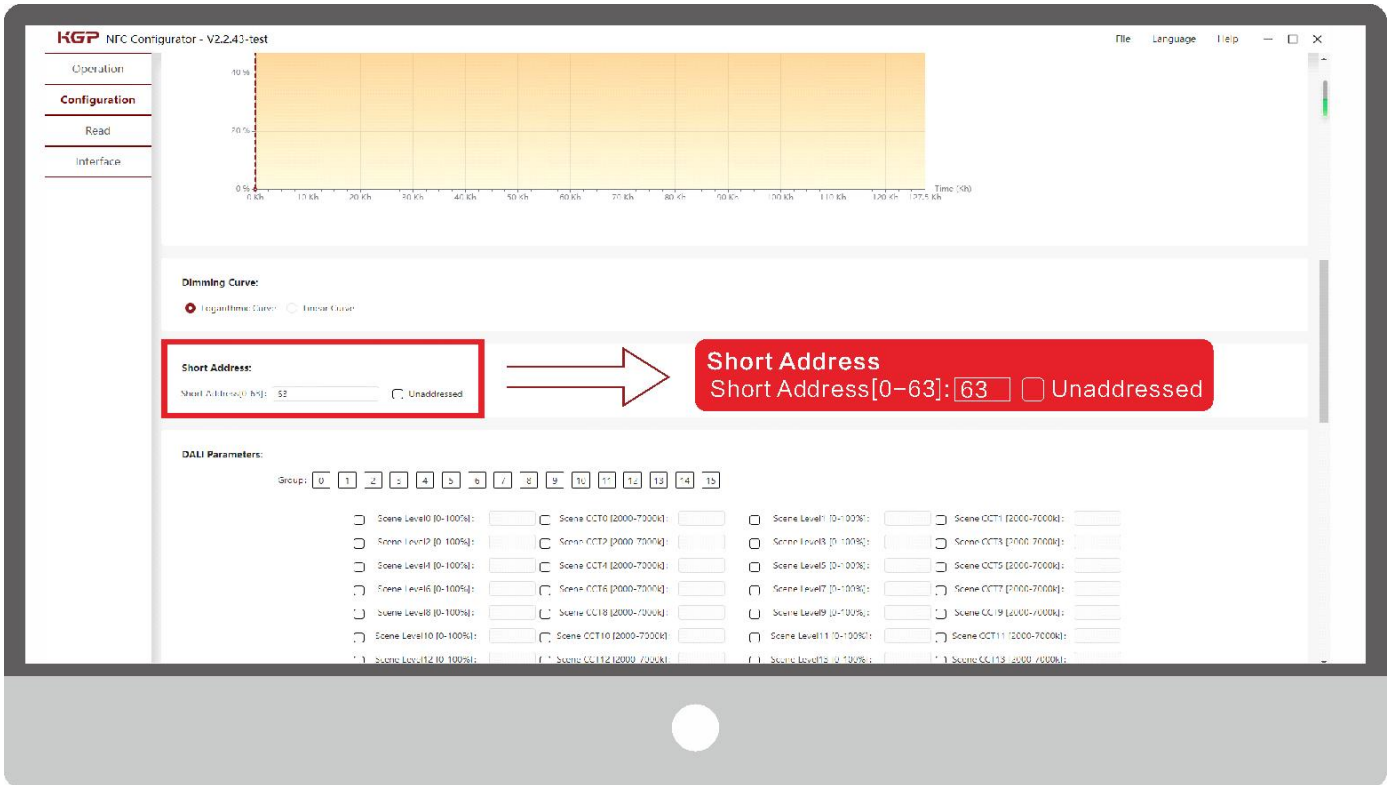

Select product name

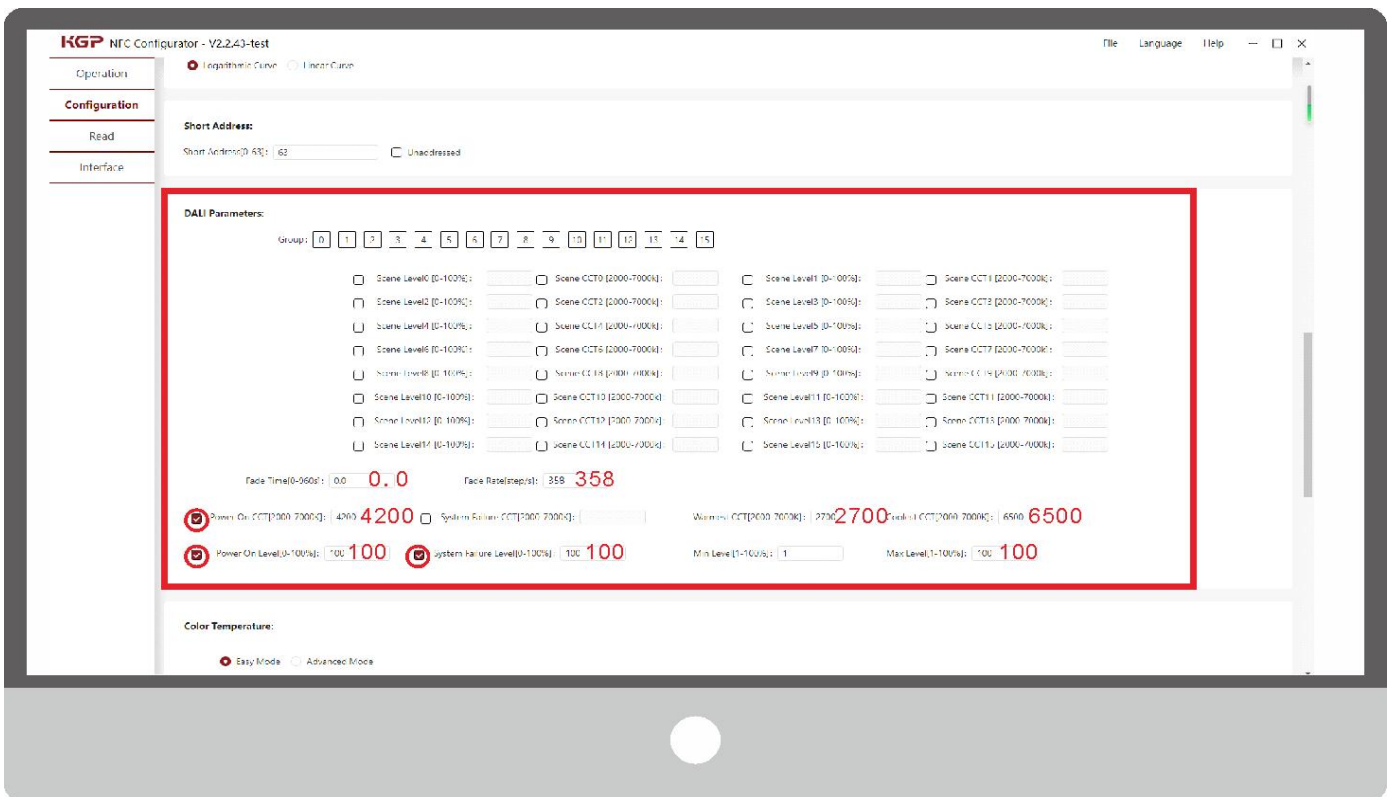

Dimming curve setting:

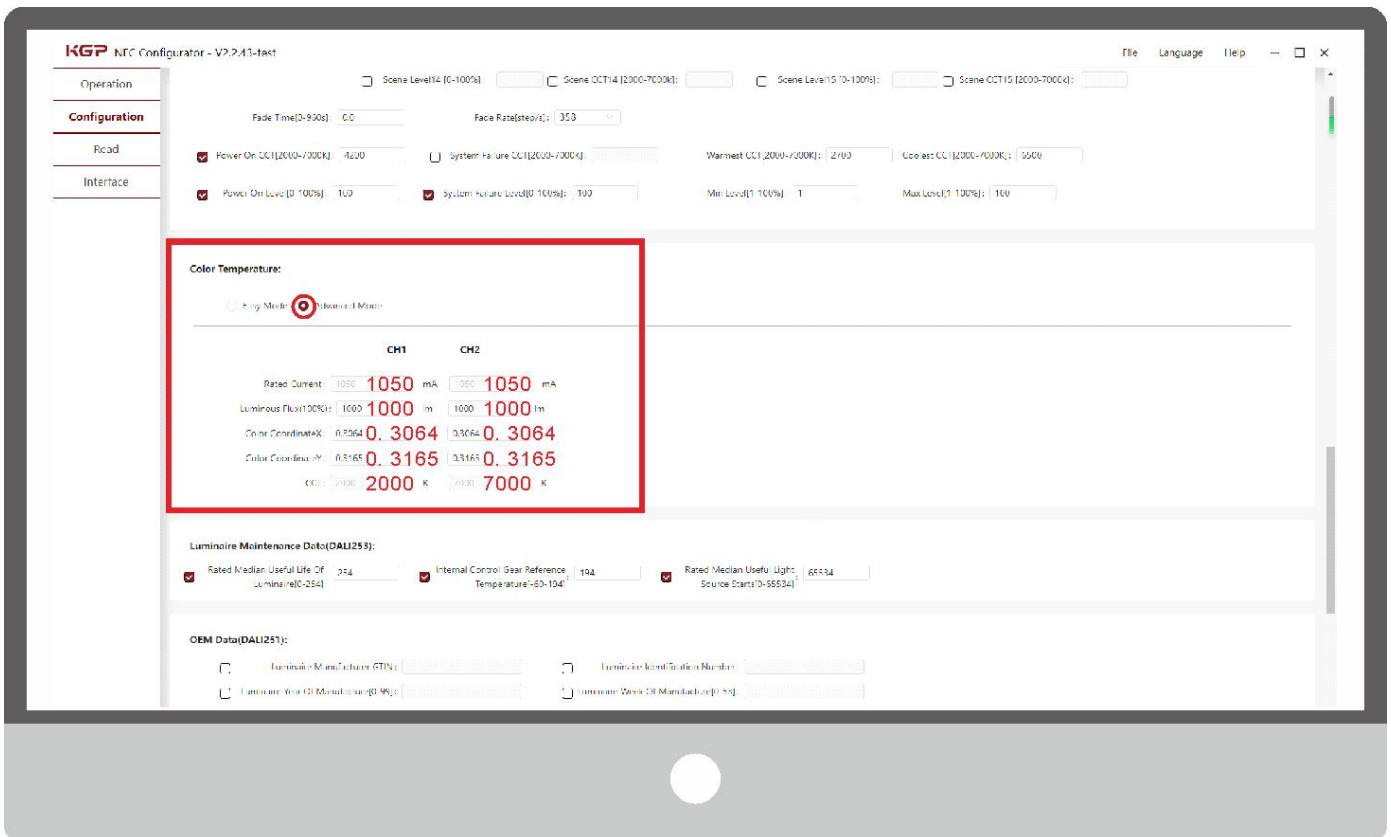

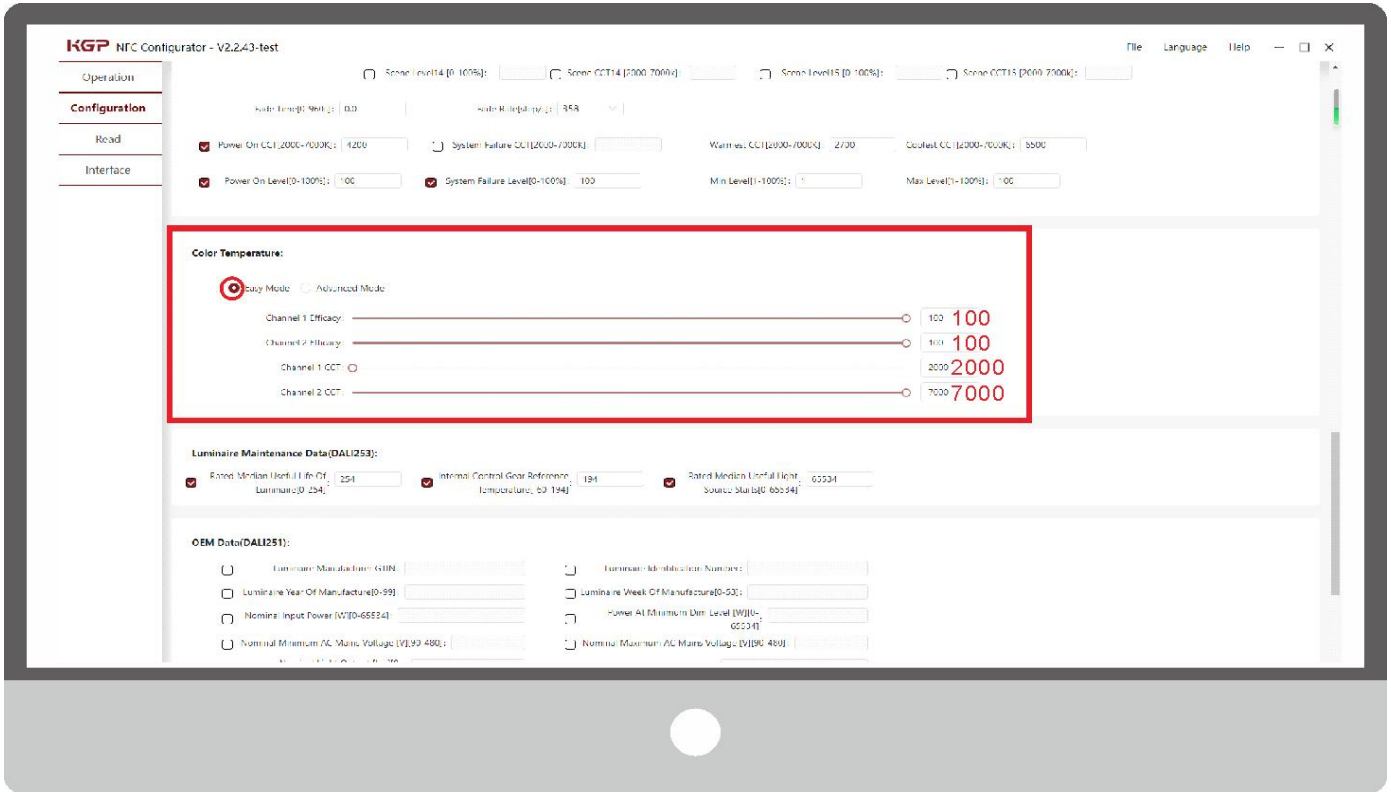

Assign Short Address :

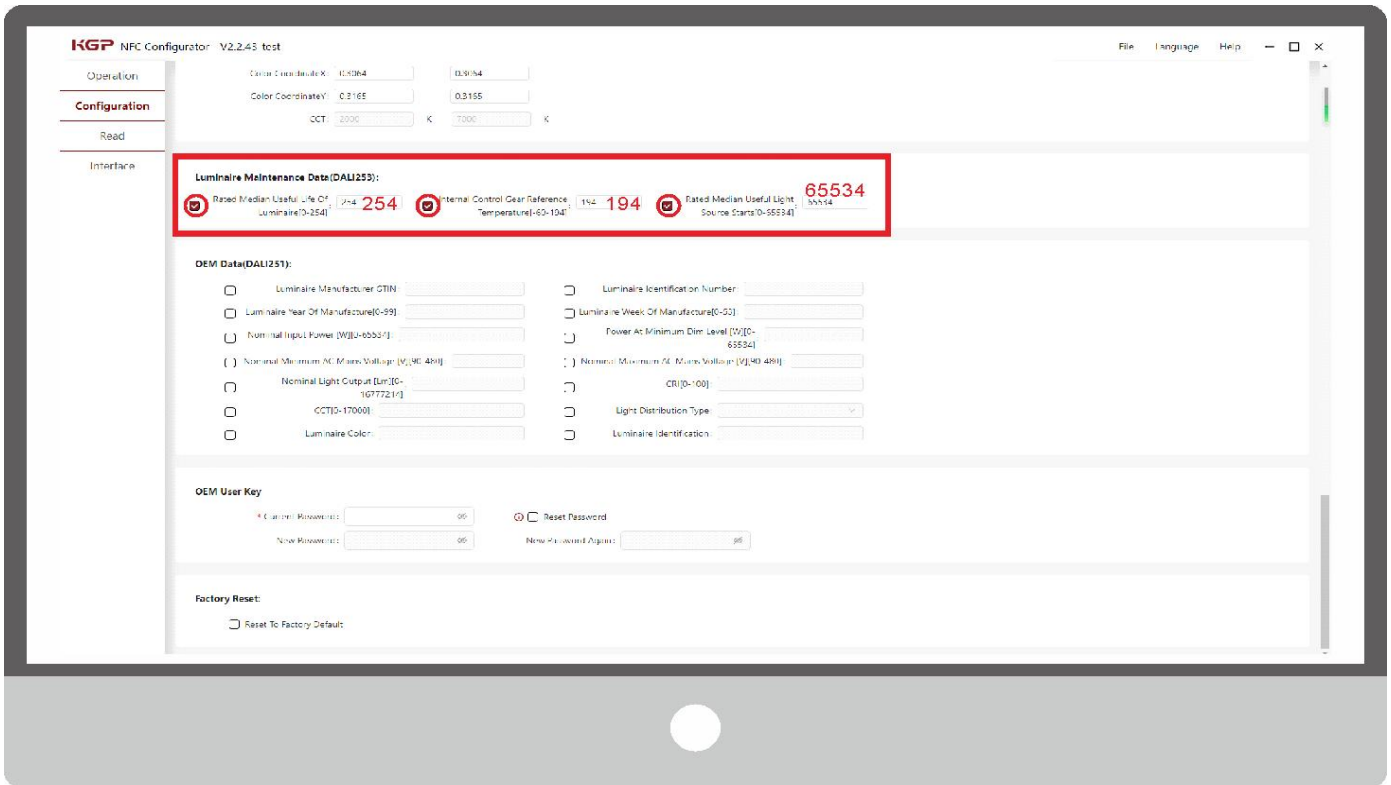

DALI Parameters setting:

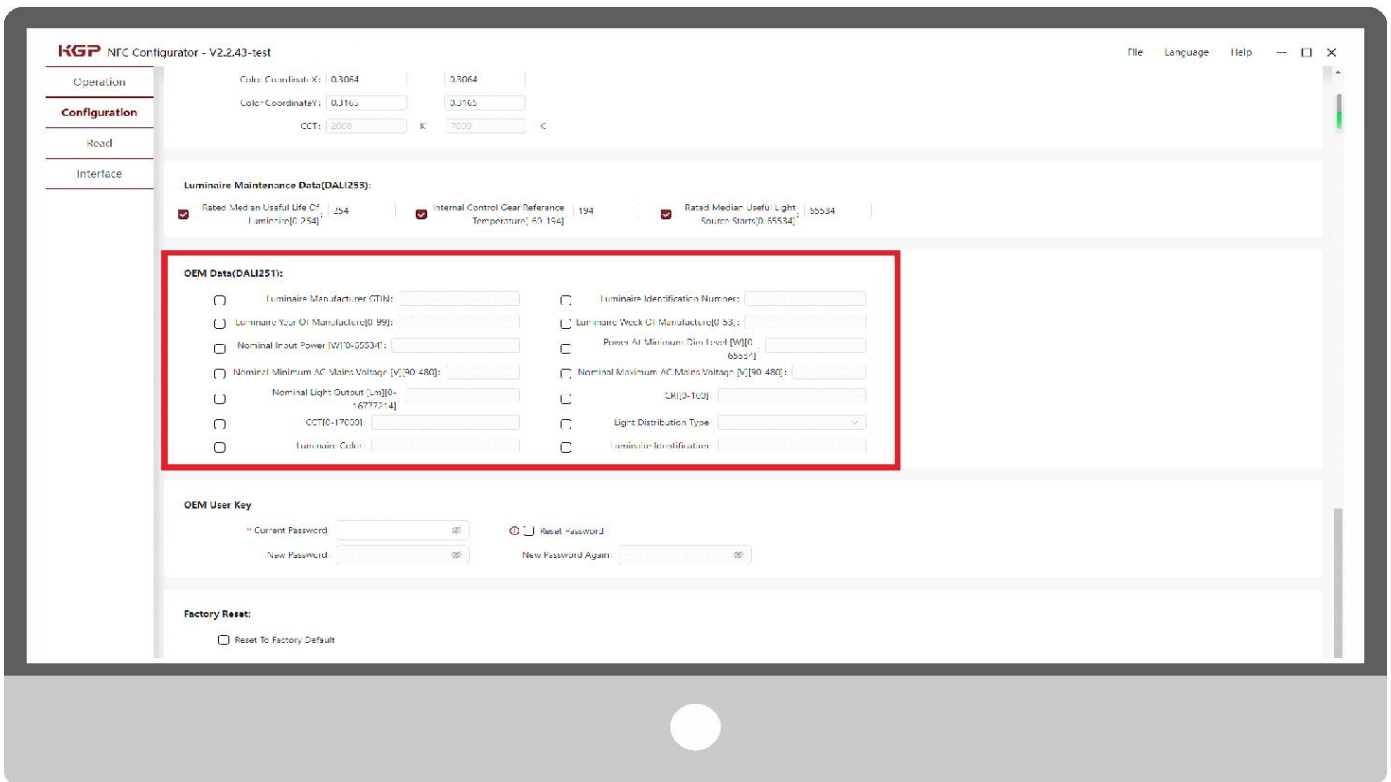

Color Temperature setting:

DALI 253 Parameter setting:

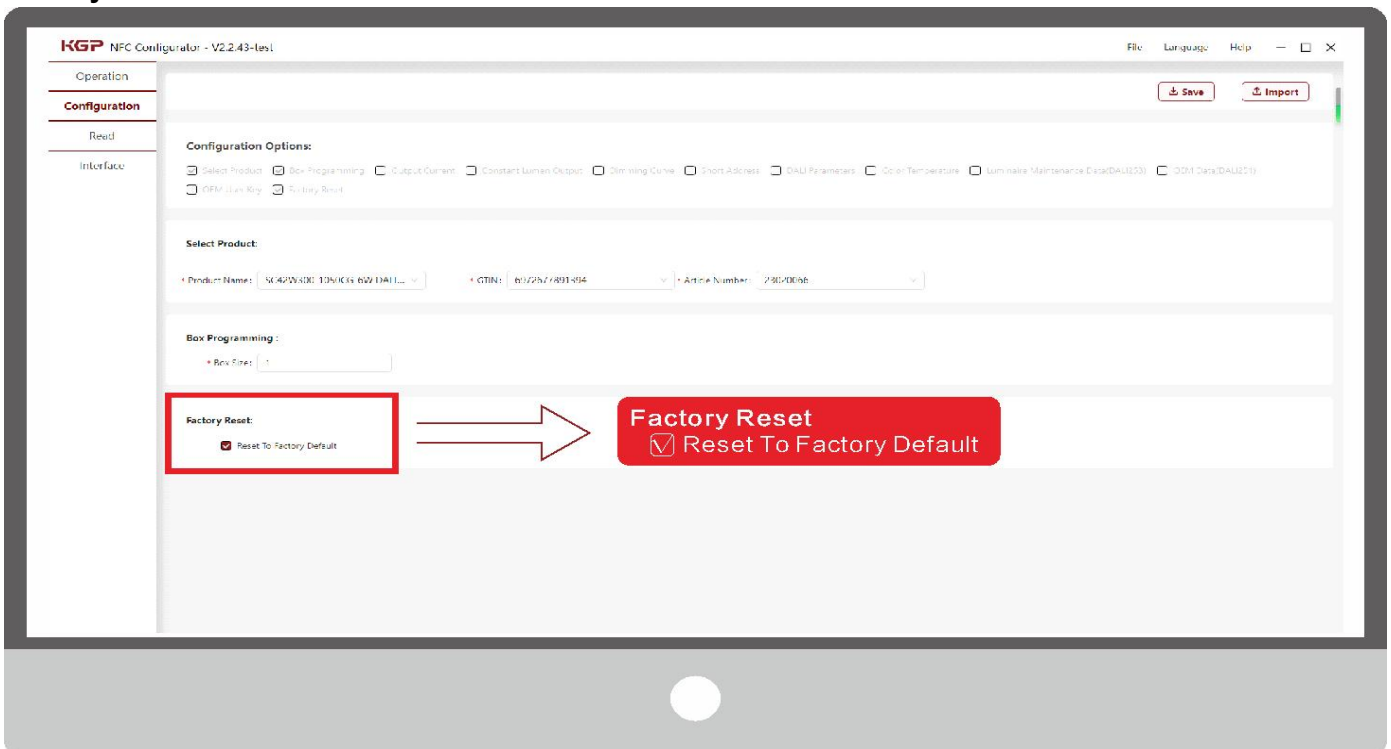

DALI 251 OEM Data setting:

OEM User Key:

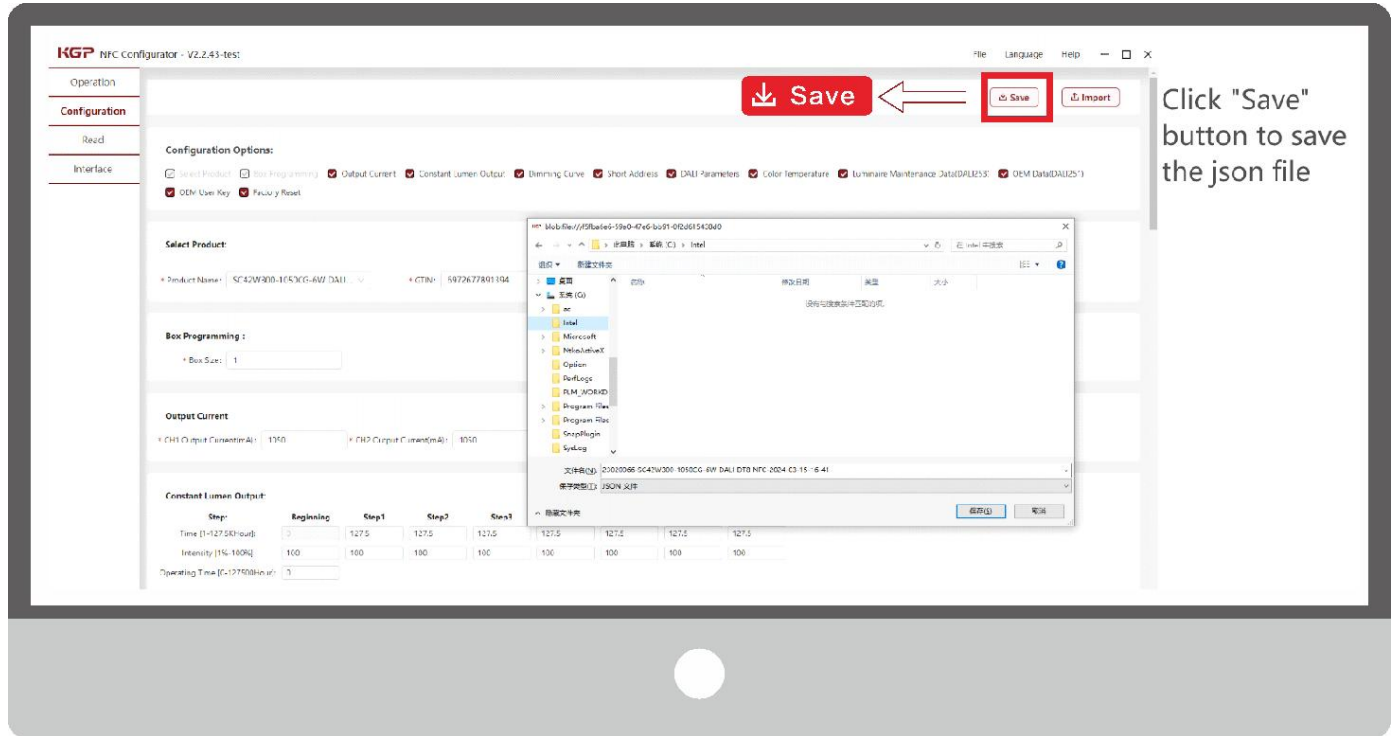

Factory Reset:

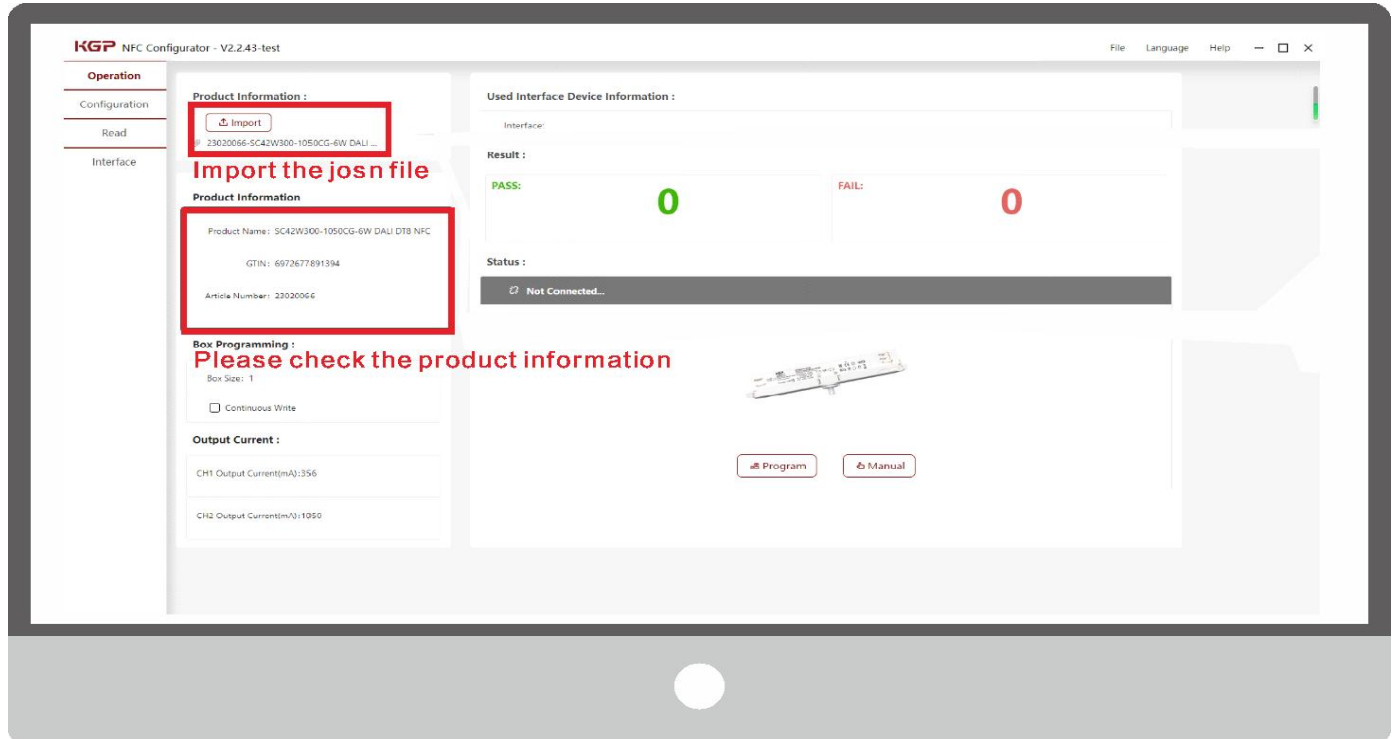

Step 4: Save the configuration file to a local directory

Click "Save" button to save the json file

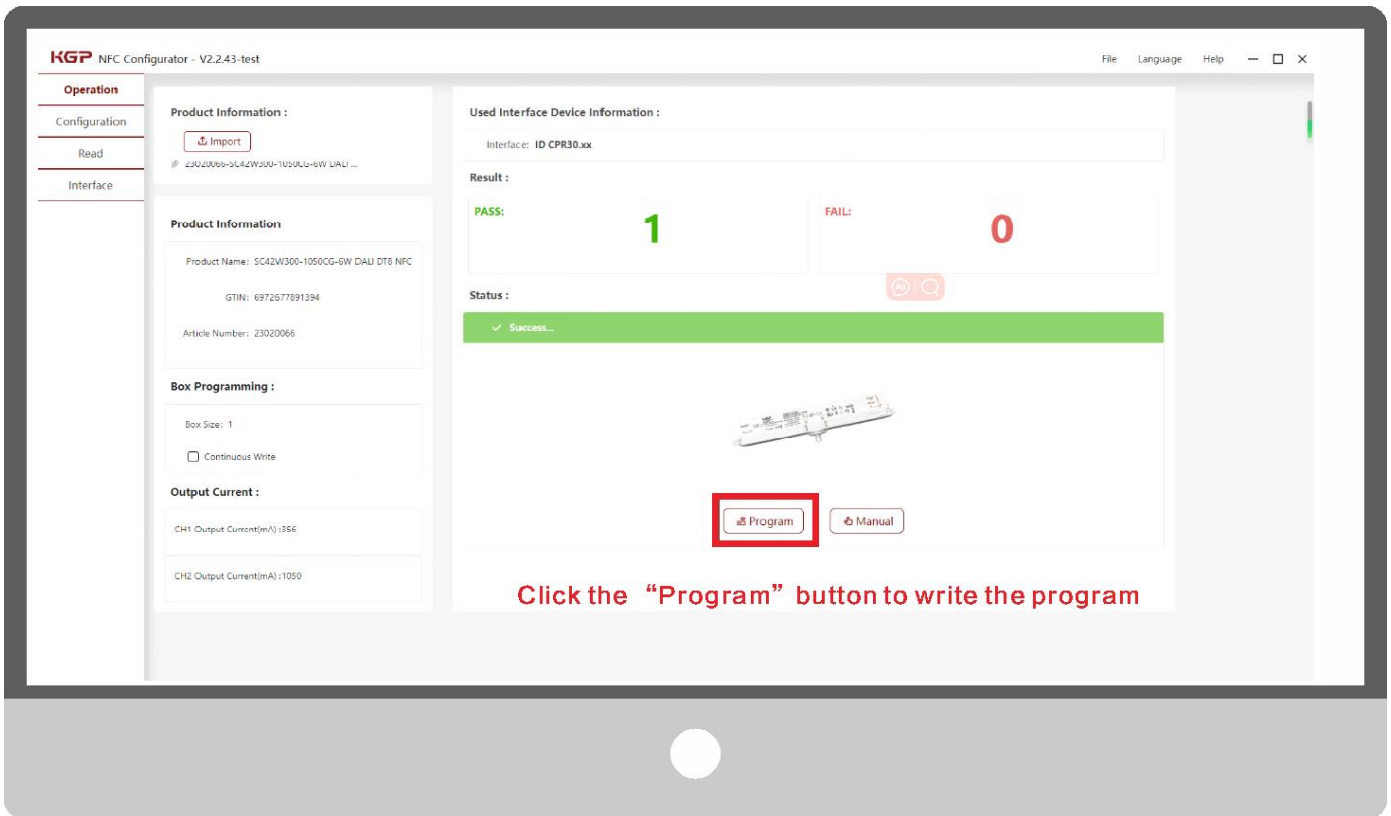

Step 5: Import configuration files for programming

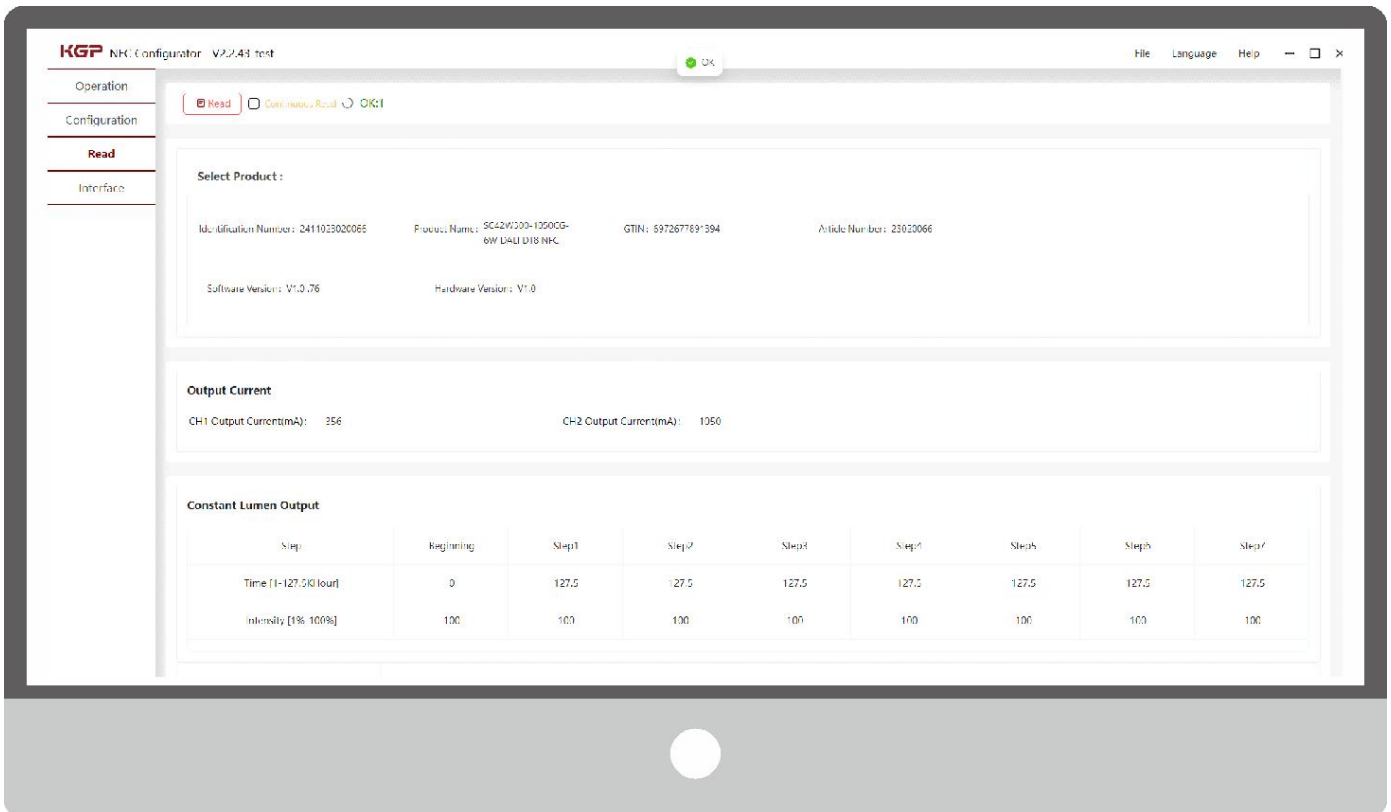

Import the json file, check the product information

Click the “Program” button to write the program

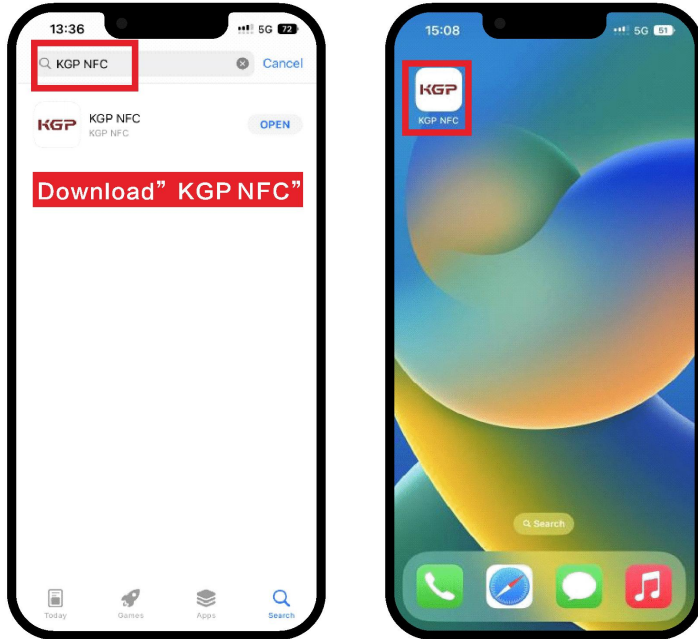

Step 6: Check that the parameters you just wrote are correct

12. Mobile client:

Step 1: Download the APP (searching “KGP NFC” from App Store).

Then open the APP

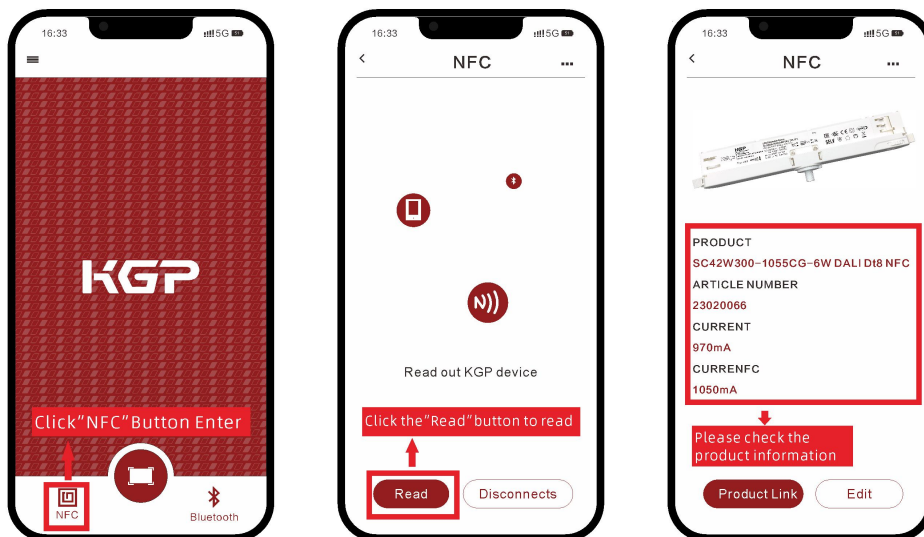

Note:

1. Please Make sure that you have enabled NFC function with your mobile phone/ tablet.
2. Please Make sure that the "NFC position" is matched.
3. Please do not power on the device before setting.

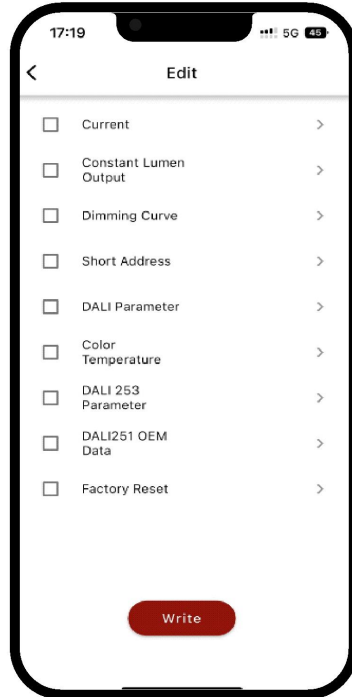

Step2: Enter the software and enter parameters configuring page.

- 1) Click “NFC” button Enter
- 2) Click the “Read” button to read
- 3) Check the product information

Step 3: Few parameter interface, you can choose the setting based on your requirements.

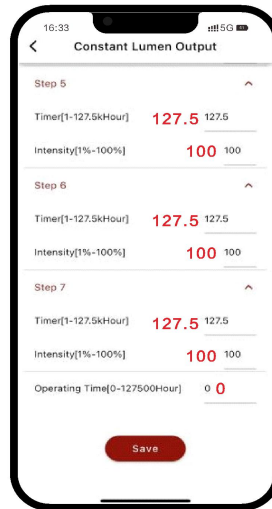

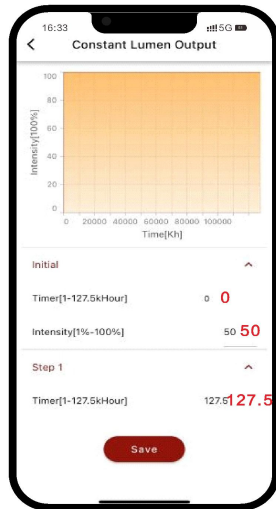

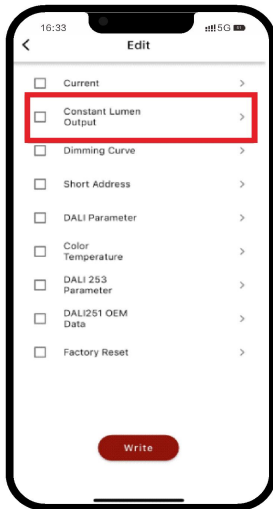

Click "Edit" button enter the page

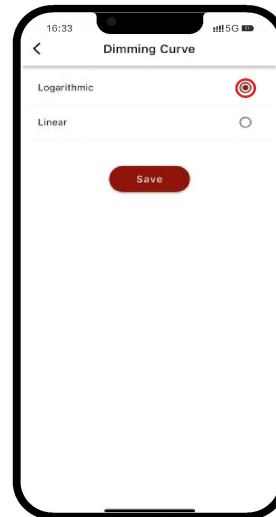

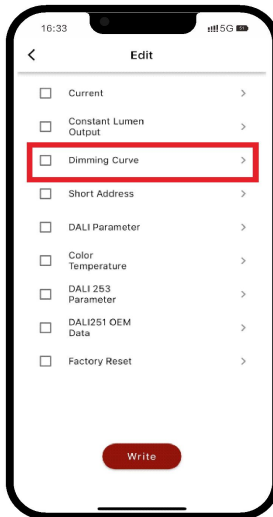

Output current setting:

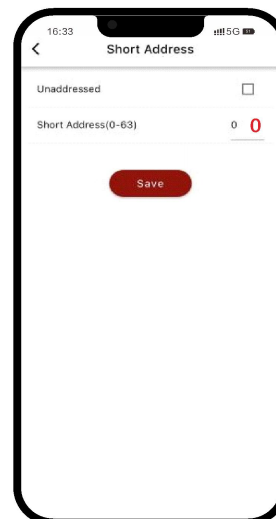

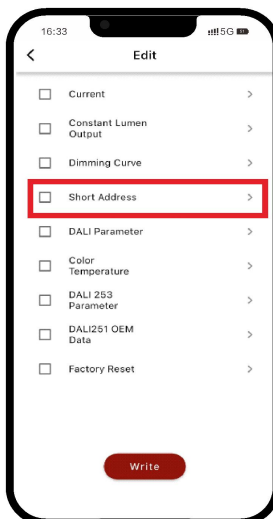

Enter CLO Setting:

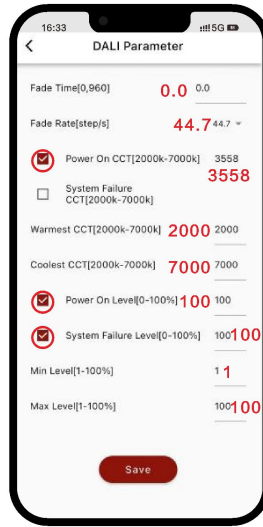

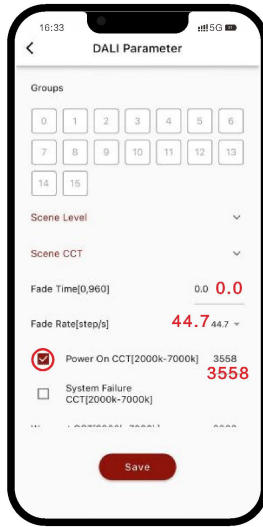

Dimming curve setting:

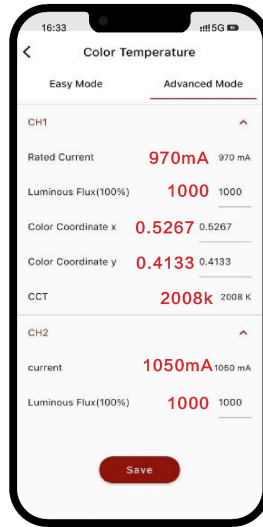

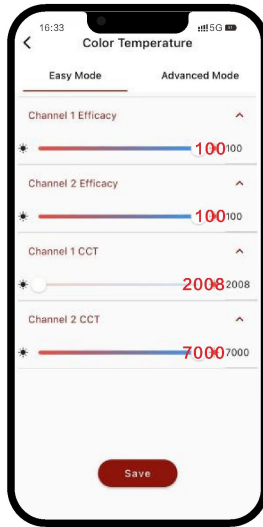

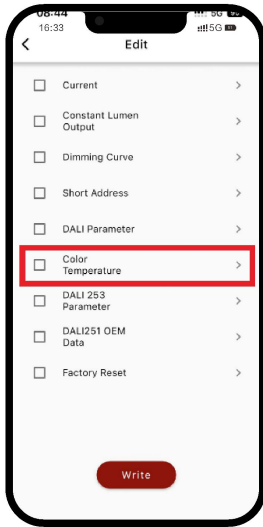

Assign Short Address:

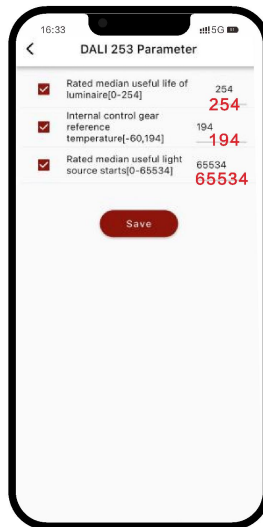

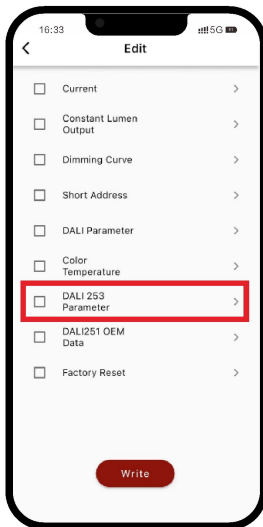

DALI Parameter setting:

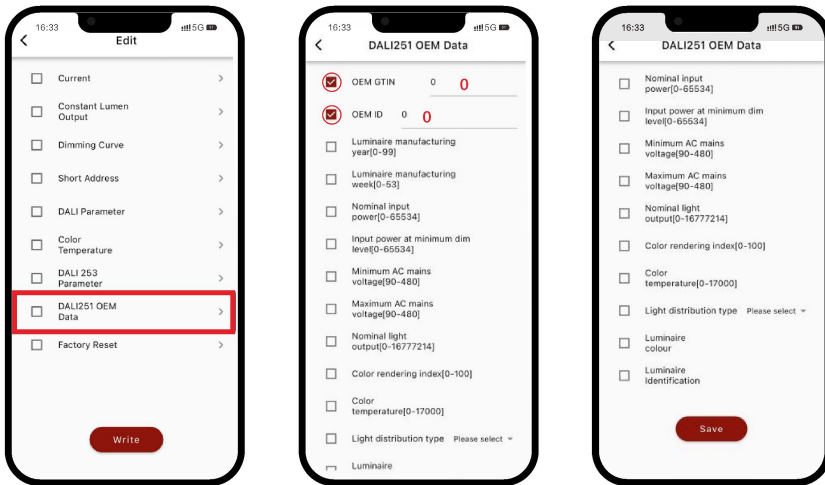

Color Temperature setting:

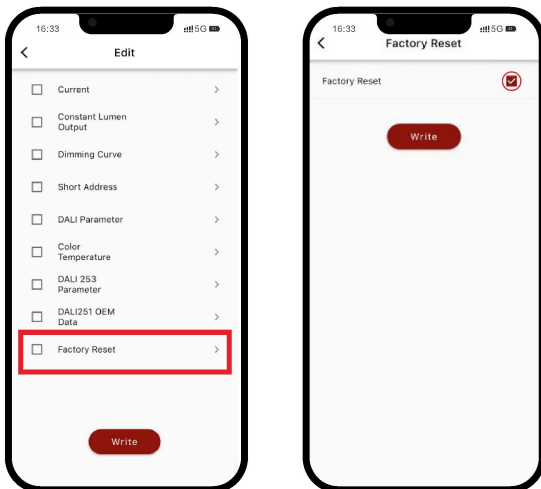

DALI 253 Parameter setting:

DALI 251 OEM Data setting:

Factory Reset:

Step4 : After the configuration is complete, save the selected configuration using NFC, write the configuration, and power on the device

Click write Program

Tips:

- 1.NFC function doesn't require any power driver.
2. Many functions can be configured by NFC.Kindly check your desired functions.

13. Functions

16.1 OEM Identification

The OEM (Original Equipment Manufacturer) can set his own identification number.

DALI Part 251: Memory bank 1 extension.

16.2 OEM GTIN

The Original Equipment Manufacturer (OEM) can set his own Global Trade Item Number (GTIN).

DALI Part 251: Memory bank 1 extension.

16.3 Luminaire data

This function provides the asset management with accurate data about the luminaire.

DALI Part 251: Memory bank 1 extension.

DALI Part 253: Luminaire maintenance data.

16.4 LED current

The LED output current must be adapted to the connected LED module.

The value is limited by the current range of the respective device.

The output current of the LED driver can be adjusted in a certain range.

Adjustment is done by KGP Configurator via NFC.

16.5 Switch DIM

Integrated Switch DIM function allows a direct connection of a push button for dimming and switching.

Brief push (< 0.6 s) switches LED driver ON and OFF. The dim level is saved at power-down and restored at power-up.

When the push button is held, LED modules are dimmed. After repush the LED modules are dimmed in the opposite direction.

In installations with LED drivers with different dimming levels or opposite dimming directions (e.g. after a system extension), all LED drivers can be synchronized to 50 % dimming level by a 10 s push.

Use of push button with indicator lamp is not permitted.

16.6 Corridor FUNCTION

With the Corridor FUNCTION and a commercially available motion detector, it is easy to adapt the lighting in one area to its use.

That is, when the area is entered by a person, the lighting dims instantly to the desired brightness and is available in full strength.

After the area is left by the person, the brightness dims slowly to a smaller value or switches off completely.

The individual parameters of the desired profile, such as brightness values or delay times, can be adjusted flexibly and individually.

16.7 Constant Light Output (CLO)

With this function the light output of the LED module can be kept equal over the lifetime.

The light output of an LED module reduces over the course of its lifetime.

The Constant Light Output (CLO) function compensates for this natural decline by constantly increasing the output current of the LED driver throughout its lifetime.

CLO shall be achieved by limitation of the LED current at the commissioning of the LED driver and providing a linear interpolation of the current over the time, depending on the data points given by the user.

The user has to insert up to eight pairs of data (time, level).

The output curve is the result of connecting the user data points linear.

Detailed description for CLO see product manual.

The minimal CLO starting point is limited by the smallest output current of the LED driver.

16.8 Dimming curve

DALI: The desired dimming behaviour is selected via two different dimming curves (logarithmic or linear). DALI: The desired dimming behaviour is selected via two different dimming curves (logarithmic or linear).

The default setting of the dimming behaviour is logarithmic.
