9. Instruction Notice

9.1. Noise

When using this product, please insert a bypass capacitor between the power supply and GND.
(Closer to the product terminal is desirable.)

The bypass capacitor values shown in our specifications and drawings are for reference only.
(They are not guaranteed values.)

In actual use, please select the appropriate bypass capacitor value for your circuit.

NDK shall not be liable for any and all events resulting from or in connection with the use of this product in a manner that does not comply with the above instruction.

9.2. Resistance to dropping

The NZ2520S series is designed to be impactproof so that no damage occurs when dropped a height(75 cm) three times. However, if dropped from a desk etc., it is advisable to check their performance or contact us to check it.

9.3. Electrostatic protection

The NZ2520S series employ C-MOS ICs for the active element. Please use them in static-free environments.

9.4. High temperature

Normal operation cannot be guaranteed for the NZ2520S series at +125 °C (for 24 h). Be sure that the units are kept within the specified temperature range.

9.5. Cleaning

Basically, the NZ2520S series are applicable for ultrasonic wave cleaning. However, in some case, during ultrasonic wave cleanings, internal design may get damage. Please check condition carefully beforehand.

9.6. Other

The NZ2520S series are C-MOS applied products. And careful handling(same as with C-MOS IC) are needed to avoid electrostatic problems.

Incorrect PAD connection is cause of trouble. Please make sure to connect correctly as below.

#2 terminal → GND

#4 terminal → V_{CC}
